ART UNIT PAPER NUMBER

1714

DATE MAILED: 06/07/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/623,686

Applicant(s)

FACTOR ET AL.

Examiner

Cephia D. Toomer

Art Unit

1714

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 March 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This Office action is in response to the amendment filed March 13, 2006 in which claims 5 and 11 were amended. The 102 rejection over Roos is withdrawn in view of the 132 declaration. The rejection of the claims under 35 USC 112, second paragraph is withdrawn in view of the amendment to the claims.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 15-17 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of copending Application No. 11/064,281. Although the conflicting claims are not identical, they are not patentably distinct from each other because the additive of the present invention is set forth with comprising language and encompasses a liquid comprising a manganese-containing compound.

Art Unit: 1714

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. Claims 1-5 and 7-21 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 3-5 and 7-21 of copending Application No. 10/623,092. Although the conflicting claims are not identical, they are not patentably distinct from each other. The preambles differ; however, since the present invention and the copending invention are using the same components in the same environment it would be reasonable to expect that there would be a reduced amount of NO_x resulting from the combustion of the coal.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1-21 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6, 8-11, 14-16, 18 and 20 of copending Application No. 10/852,497. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present method claims encompass a combustion chamber in which coal and oxygen are combusted.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-3, and 6-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Zamansky (US 6,206,685).

Zamansky teaches a method of decreasing the amount of nitrogen oxides released to the atmosphere upon the combustion of coal (see abstract). In one method the concentration of nitrogen oxides in a combustion flue gas is decreased by providing a metal-containing additive in the main combustion zone. This method includes providing a main combustion zone for oxidizing a combustible fuel with an oxidizing agent, with the combustion forming a combustion flue gas that contains nitrogen oxides. A metal-containing additive is introduced into the combustion zone separately or with reagents (e.g., fuel or air), and is allowed to react within the combustion flue gas to decrease the concentration of nitrogen oxides therein. The combustion zone is adapted to oxidize a combustible fuel with an oxidizing agent, thereby generating a combustion flue gas. The combustible fuel can be coal. Similarly, the oxidizing agent can be recirculated flue gas (see col. 7, lines 16-34).

The metal-containing additive can be provided to the combustion zone in various ways. For example, the metal-containing additive can be premixed with the combustible fuel, or can be provided separately, such as by injecting directly into the combustion zone. Alternatively, the metal-containing additive can be injected into the

Art Unit: 1714

combustion zone along with an oxidizing agent, such as an air stream. Other variations can be used as desired. For example, a portion of the metal-containing additive can be injected with the combustion fuel and another portion injected with the oxidizing agent. The metal-containing additive can be injected in one or more locations in the combustion zone, with or without the combustible fuel or oxidizing agent (see col. 8, lines 34-46). The metal containing additive may be a manganese compound either inorganic or organic (see col. 7, lines 40-53). The amount of additives in the combustion zone can be in the range of about 1 to about 10,000 ppm (see col. 8, lines 6-9) .

Accordingly, Zamansky teaching all the limitations of the claims anticipates the claims.

7. Claims 1-3, 8-9 and 14-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Rolfe (US 3,443,916).

Rolfe teaches a manganese-amine complex that is added to coal. Upon combustion of the coal, noxious fumes and smoke are reduced (CO, NO_x and carbon particles) (see abstract; col. 2, lines 61-69). Rolfe adds 8-15 ppm of the manganese compound to coal (see col. 6, lines 27-35). The manganese complex may be a manganese-amine carboxylate (see col. 6, lines 39-69).

Accordingly, Rolfe teaching all the limitations of the claims anticipates the claims.

8. Claims 1, 2, 4-11 and 13-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Kerley (US 3,927,992).

Art Unit: 1714

Kerley teaches a process for reducing smoke and soot (carbon) produced in the combustion of coal by adding a manganese compound such as methylcyclopentadienyl tricarbonyl in an amount from 0.005-5% (5-50,000 ppm) (see abstract; col. 1, lines 39-50; col. 3, lines 40-41; col. 4, lines 1-5). Kerley teaches that the manganese may be included in the coal, injected into the coal feed or introduced separately into the combustion chamber (see col. 4, lines 9-18). Kerley discusses introducing the coal into the combustion chamber by feeding the coal and manganese compound directly into a blower system (air stream) or by addition of the secondary air (see col. 4, lines 33-59). Since Kerley teaches adding the same manganese compound in the same amount to coal and combusting the mixture, it would inherently reduce the amount of NO_x and CO.

Accordingly, Kerley teaching all the limitations of the claims anticipates the claims.

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

9. Claims 1-5, 7-9, 11 and 14-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Aradi (US 20040118032)

The applied reference has a common inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art

Art Unit: 1714

under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Aradi teaches adding a manganese compound to coal (see abstract; paragraph 0017 and 0038). The manganese compound may be a sulfonate, phenate or methylcyclopentadienyl manganese tricarbonyl and the fuel is coal (see paragraphs 12 and 17). Aradi teaches using from 2-200 ppm of manganese. Aradi teaches that the catalyst and manganese compounds promote carbon burnout in combustion particulate by-products such as soot (carbon) and smoke and control CO and NO_x emissions (see paragraph 29).

Accordingly, Aradi teaching all the limitations of the claims anticipates the claims.

10. Applicant's arguments have been fully considered but they are not persuasive. Applicant argues that Zamansky fails to teach or suggest reducing carbon in flyash, CO or NO_x through the method of the present invention. Applicant argues that the simultaneous reduction of NO_x and carbon within flyash is not discussed, suggested or recognized by Rolfe. Applicant argues that Kerly is directed to reducing soot, smoke and irritating gases, which is wholly unrelated to reducing carbon in flyash or CO simultaneously with NO_x. Applicant argues that Aradi does not teach the simultaneous reduction of carbon in flyash with NO_x or the simultaneous reduction of carbon in flyash with NO_x or the simultaneous reduction of carbon monoxide and NO_x.

Art Unit: 1714

"[T]he discovery of a previously unappreciated property of a prior art composition, or of a scientific explanation for the prior art's functioning, does not render the old composition patentably new to the discoverer." *Atlas Powder Co. v. Ireco Inc.*, 190 F.3d 1342, 1347, 51 USPQ2d 1943, 1947 (Fed. Cir. 1999). Thus the claiming of a new use, new function or unknown property which is inherently present in the prior art does not necessarily make the claim patentable. *In re Best*, 562 F.2d 1252, 1254, 195 USPQ 430, 433 (CCPA 1977).

The examiner maintains that Kamansky, Rolfe, Kerley and Aradi teach compositions containing the same components in the same proportions as recited by the instant claims and these compositions are used in the same environment as those of the instant claims. Given these teachings, the prior art of record inherently teaches the disputed limitations.

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

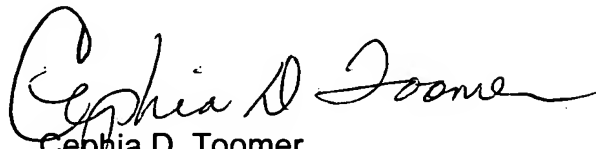

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Art Unit: 1714

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cephia D. Toomer whose telephone number is 571-272-1126. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on 571-272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
